GroupVille 2

In today's world, with constant data overload and a geographically distributed work force, the ability to find, prioritize and act on critical information is of vital importance for individuals and organisations alike. GroupVille addresses these needs by providing a secure environment in which to store, manage, share and collaborate on any type of information.

:What is GroupVille?

GroupVille is a unique Web-based collaboration solution that meets the communication and information management needs of individuals, groups and entire organisations. Unlike other complex and expensive collaboration tools, GroupVille was built from the ground up for the Internet age with open technology standards in mind.

:Who is GroupVille for?

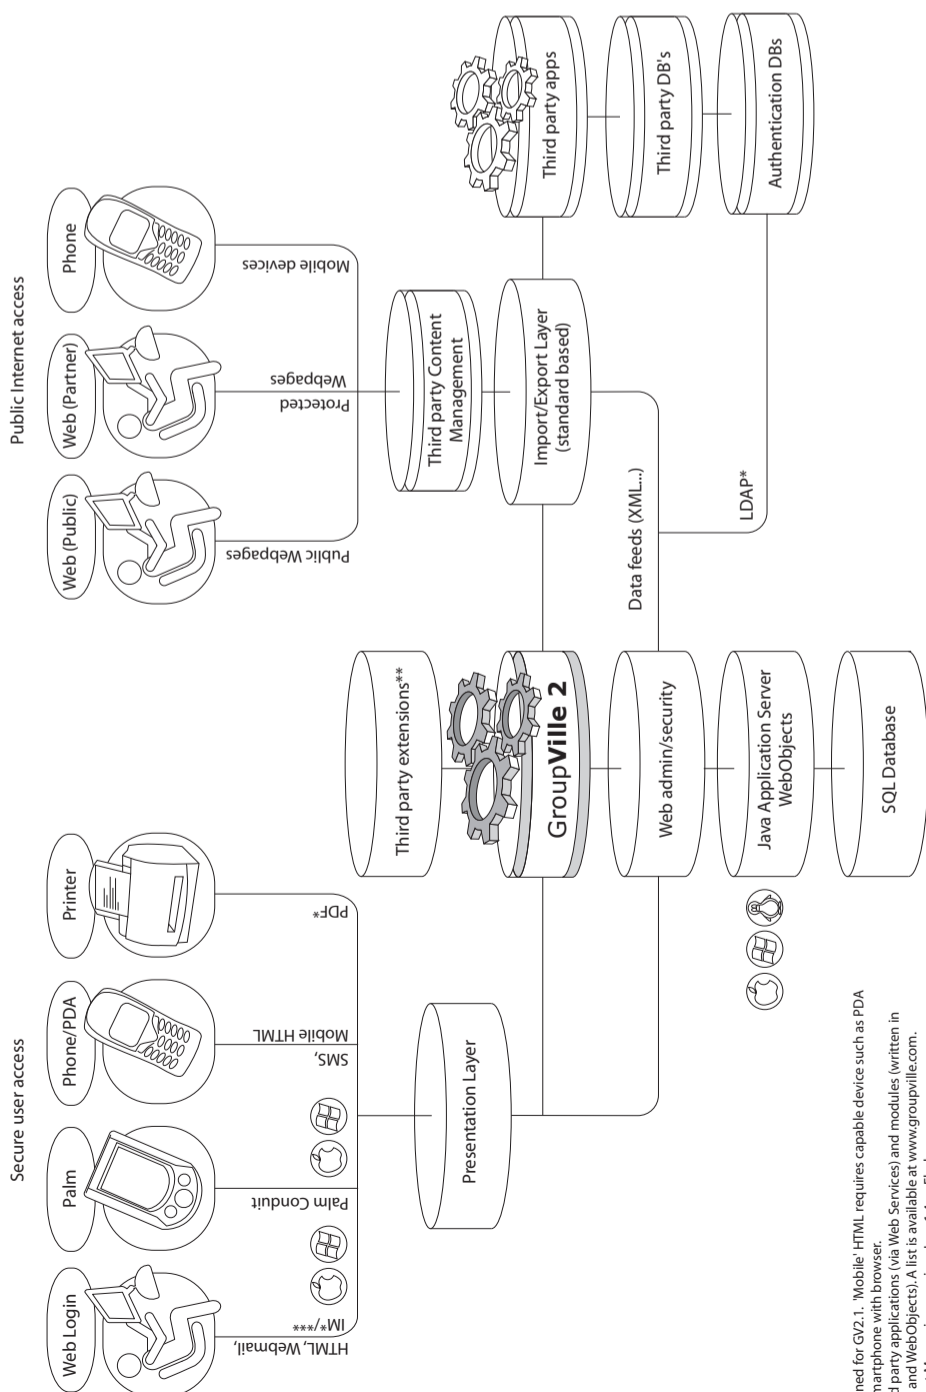

GroupVille is meant to be used by individuals, teams, corporate departments, entire companies or even complex organisational networks – essentially anyone who needs to collect, manage and share information globally.

That's why we call GroupVille the Digital Swiss Army Knife for the 21st century.

Open your web browser and log in. It's as simple as that to enjoy the power of GroupVille.

GroupVille 2 Overview

GroupVille Features And Benefits

: GroupVille is easy to use from day one
Anyone who can use a web browser can use GroupVille. Therefore, there is no steep learning curve and no need for expensive and time-consuming training programs.

: GroupVille facilitates better communication and information flow
GroupVille is a community and organisation building platform and helps grow the value of the information through its exchange even if your people are geographically disperse. It does not interfere with existing communication channels such as e-mail systems but extends their usefulness by storing data in a central knowledge and collective experience repository.

: GroupVille is based on open standards and very scalable
GroupVille uses open standards for import and export of data such as XML, vCard and vCalendar. Its flexible architecture allows it to scale from small installment to thousands of users.

: The total cost of ownership of GroupVille is very low
GroupVille works with your current infrastructure by building upon and extending it rather than requiring it to be replaced. Furthermore, GroupVille does not require any hardware upgrades or installation on your client machines – a web browser is all that is needed. This browser-based interface means low training and maintenance costs.

: GroupVille Availability
- GroupVille will be available in Q2 2004.
- Free updates (2.x) with new features such as LDAP support will be made available later.

: Licensing
- Free demo license is available at www.groupville.com.
- Licenses are available in 5 and 10 user increments (5, 10, 25 users, etc.) up to a site license. A free 3-user license is also available.
- Each license includes 12 months of free e-mail support. Additional support option can be obtained from resellers and Sendai.

: Available Packages – 3 easy options
1. Standalone software available for secure online ordering from Sendai or resellers to be installed on your existing servers.
2. Rental service (ASP) over the Internet from resellers worldwide. A list of resellers is available on www.groupville.com
3. Preconfigured server and software bundle (with backup utility) from Sendai (within Switzerland) or value-added resellers (international).

Please visit www.groupville.com for the latest information and pricing.

System requirements and technical specifications

:Localization
GroupVille 2.0 is localized in 8 languages (Unicode support for Chinese and Japanese in next release). Users can choose different languages individually based on their needs within the same GroupVille implementation.

:No Desktop Clients
No more hassle of performing installation and updates on client machines. A Web browser is all that one needs to access GroupVille. While it will work with almost any modern Web browser, GroupVille is optimized for Internet Explorer 5.x and later and Netscape Navigator 7.x and compatible browsers.

: Mobile and PDA Access
GroupVille supports Palm OS 4.0 or later for Palm sync and Palm Desktop 4.0 or later (using Palm conduits) on Mac OS 9, Mac OS X and Windows. Support for mobile phones (SMS messaging and HTML access) is also available.

: Application Server
GroupVille requires WebObjects (www.webobjects.com) version 5.2 or later running on Mac OS X Server 10.3, Windows 2000 Server or Solaris 9. Since WebObjects applications run on virtually any Java 2 (1.4.2) Standard Edition machine, Linux equipped servers also work but have not been formally qualified.

: SQL Database Server
GroupVille has been tested and is shipped with FrontBase (www.frontbase.com) 4.1.4 or Openbase 8.0 (www.openbase.com).

: Security and Deployment
Only standard connections (http) to the GroupVille server are required. GroupVille can thus be offered on corporate Intranets or over the Internet on an ASP (Application Service Provider) basis. Secure connections (SSL encrypted) are also supported. The databases can be password protected and encrypted.
